

# ANTI-SIPHON

Device to prevent siphoning effect

Into the box

Anti-siphon

Device able to prevent the siphon effect.

This effect occurs when the delivery pipe rises vertically and then descends beyond the level of the tank.

In these conditions, the water draining downwards tends to empty the pipe.

This effect causes short dry running periods, that decreases the pump life.

Code	Article	Description
99PLP736C	ANTI-SIPHON	Device able to prevent the siphon effect

## Technical data

- Connection for internal pipe diameter 6 mm
- The anti-siphon device prevents emptying of the pump, which always remains charged, preventing noise at the start of operation and safeguarding against siphoning effect.

Example of installation

- 1 - Correct installation
- 2 - Incorrect installation  
the pump is emptied
